

Universal Mini-Splitter

1/4 inch material

The Universal Mini-Splitter has a specific design made for powders and granular materials. Top sizes less than 1/4" are preferred. A portable benchtop is featured that can be easily positioned anywhere. Also featured on the splitter are 48 adjustable 1/8" wide chute bars. The bars are built with stainless steel hoppers and frames. The chute has a 60° angle that quickly and accurately splits powders and light-weight materials. A spring-loaded gate releases hoppers and 103.7in³ capacity. The machine makes preparation of bulk samples simple by evenly releasing material over the chutes for repeatability.

Mini-Splitters come with two sample pans for proper operation. Additional pans are available for more efficient sample processing.

- Great choice for separations of powders and granular materials with top sizes less than 1/4in (6.4mm)
- Small models are highly transportable for wherever your testing takes you
- 48 adjustable 1/8in (3mm) wide chute bars
- Spring-loaded gate release hoppers evenly release material over chutes for repeatability
- Stainless steel construction prevents contamination and enhances durability
