

Oilless Vacuum Pumps

Small Oilless Vacuum Pump

The small oilless vacuum pump provides vacuum capacity equivalent to many oil systems. It is truly an oilless pump, leaving you to never have to deal with the time-consuming oil changes or filter flasks full of desiccants. The vacuum has a 1/3hp motor that pulls a vacuum at a rate of 45-liters per minute. The vacuum is 11"x 6.6"x9" high and comes with a 3-prong line cord. The vacuum pump is very quiet and weighs 16.5 pounds. With its small size and weight the device can fit on a shelf.

Large Oilless Vacuum Pump

The large oilless vacuum pump allows operators to perform multiple specific tests at the same time. The heavy-duty device combines large capacity with maintenance free operation. The vacuum pump pulls down to a 9mm vacuum at a rate of 99 liters per minute. The large vacuum pump determines the maximum theoretical gravity of bituminous paving materials.
