

PumpSaver

The PumpSaver air drier protects vacuum pumps and optimize efficiency. The PumpSaver features a high-performance thermoelectric chamber. The thermoelectric cools incoming air by condensing and removing moisture before it reaches the vacuum pump. Eliminating the need for elaborate moisture traps and desiccant cartridges. In addition, reduces resistance to air flow, while maximizing pump efficiency and increasing service life. The vacuum pump enhances accuracy and repeatability by reaching the desired vacuum immediately.

One inlet and one outlet port for connection between the vacuum pump and the pycnometer is featured on the PumpSaver. The ports use 3/8, 7/16 or 1/2in ID tubing. The drier operates at 120-240V/50-60Hz.
